

iLumio Valet

iLumio Valet, a **multimedia digital entertainment and service system**, is the most advanced product on the market in the area of **digital guest service accessible from hotel TVs**. It is complemented by a dedicated application on the tablet available in the guest's room. All of this allows for efficient management of room automation and communication with staff during the stay.

The innovative and practical features within the iLumio system were developed thanks to experience gained during years of work implementing IPTV solutions. These give the hotel certainty that are able to meet the changing and growing demands of the client. New ideas continuously contribute to the development of the system's functionality.

What makes us special?

Branding

Interface branded with hotel brand.

Integration with PMS systems

Full integration with: Micros Fidelio and Opera, LSI, MC Comp, Sihot and others. It allows, among others, the displaying of a personalized welcome screen.

Dedicated hotel application

The application is integrated with the hotel BMS system. This allows the managing of the room automation, e.g. lighting, temperature, blinds, etc.

Application for hotel management

Monitoring guest activity, accepting and confirming orders, sending messages.

Check-in and check-out

On mobile devices, no queues

A hotel tablet is a digital service center!

Piloting the TV set.

Ordering hotel services.

Controlling lighting or temperature, creating an atmosphere.

Making voice calls (VoIP).

The possibility to watch TV channels on a tablet.
